SHRI RAM DWIVEDI

AI Engineer | Agentic AI & LLM Systems

Raipur, India · +91 93296 53872 · raunakd511@gmail.com
linkedin.com/in/shri-ramd07 · github.com/shri-ram07 · Portfolio

PROFESSIONAL SUMMARY

Final-year Computer Science student and Founding AI Engineer at Ryze AI. Built an AI agent that manages advertising campaigns on its own for 1,000+ users, and the integration that lets Claude and ChatGPT manage Google Ads accounts. Fascinated by how AI agents plan, use tools and remember; seeking an entry-level AI Engineering role.

TECHNICAL SKILLS

Agentic AI & LLMs: Google Gemini API, MCP, Agentic Workflows, LLM Orchestration, Prompt Engineering, RAG, n8n
Languages: Python, TypeScript, JavaScript, SQL, C/C++, Java
Backend & Web: FastAPI, Node.js, Express, Flask, REST APIs, Microservices, OAuth2, PostgreSQL, MySQL, React
Deep Learning: TensorFlow, PyTorch, Scikit-Learn, Transformers, Computer Vision, NLP, OpenCV, MediaPipe, ONNX Runtime
Cloud & DevOps: Google Cloud (Cloud Run, Compute Engine), Docker, CI/CD, Autoscaling, Git

PROFESSIONAL EXPERIENCE

AI Engineer (Freelance) | **ScalixAI** **Jun 2026 – Aug 2026**
Canada (Remote)

- Shipped ScalixAI's production MCP server (Python, Cloud Run): 150+ tools that give Claude and ChatGPT users plain-English control of Google Ads reporting, keyword research and campaign and budget changes.
- Enforced a plan-then-confirm workflow for every tool that changes a campaign, while reporting tools run freely, and embedded Google Ads policy checks that warn the AI off actions risking account suspension.
- Created an audit tool that flags problems in an ad account and a report builder that turns raw data into client-ready reports.

Founding AI Engineer | **Ryze AI** **Jun 2025 – Jul 2026**
San Francisco, CA (Remote)

- Architected the production Ads Specialist Agent, in which Google Gemini reads live campaign and analytics data from the connected ad platforms, then optimizes campaigns and reallocates budgets without a human in the loop.
- Engineered MCP servers that give the AI one secure, permission-controlled way to call every advertising platform's API.
- Designed the prompt framework and long-term memory that let the agent write ad strategies, reason through multi-step tasks and remember context across sessions.
- Scaled the multi-tenant FastAPI backend (one deployment serving every customer) to 1,000+ concurrent users; owned the Google Ads, Meta Ads and Google Analytics integrations, user sessions and OAuth2 login.
- Operated production on Google Cloud (Cloud Run, Compute Engine) with Docker and CI/CD pipelines, keeping the platform highly available and fast while autoscaling kept costs down.

AI Intern | **Realfy Oasis** **Mar 2025 – Jun 2025**
Bengaluru, India (Remote)

- Cut manual work 70% with n8n + LLM automations that understand each request and complete it without human hand-off.
- Delivered real-time action recognition at 92%+ accuracy that tracks several people at once and classifies poses and gestures (ST-GNN, LSTM, Transformer, MediaPipe).
- Deployed a face-verification system for secure access control, handling 500+ checks a day at 98% accuracy.
- Reduced false alarms 40% with an autoencoder model that flags abnormal movement in surveillance and fitness video.

EDUCATION

B.Tech, Computer Science (AI/ML) | **Kalinga University, Raipur** **Expected 2027**
CGPA 9.46/10 · Shipped production AI systems at three startups (intern, founding engineer, freelance) during full-time study.

PROJECTS

LeastWise: Least-Privilege IAM Agent | *Gemini, Google ADK, FastAPI, React, Docker · Tech Zephyr 4.0, IIT Bhubaneswar* **GitHub**

- Built a Gemini agent (Google ADK) that reads IAM roles and 90 days of access logs, proposes a minimal policy, tests it in a job simulator and diagnoses breakage through a dependency graph; cut 227 permissions to 48 with zero dangerous removals.

NeuroInsight AI: 3D Brain Tumor Segmentation | *PyTorch, ONNX Runtime, FastAPI, React, TypeScript* **GitHub**

- Developed a web tool that outlines brain tumors in 3D MRI scans (3D U-Net, evaluated on BraTS) and shows doctors why, with heat-maps of where the model looked and where it is unsure; FastAPI inference with PyTorch/ONNX, React viewer.

DeepFake Detector: Image Authenticity Classifier | *TensorFlow, CNN, OpenCV, Flask* **GitHub**

- Trained a CNN on 10,000+ images that tells whether an uploaded face image is real or AI-manipulated at 95%+ accuracy, and wrapped it in a Flask web app whose API returns the verdict, confidence and processing time.

Fake News Detection: NLP Text Classifier | *NLTK, TF-IDF, Scikit-Learn, Flask* **GitHub**

- Achieved 96% accuracy flagging fake news with a TF-IDF + Passive-Aggressive classifier trained on 20,000+ articles, with a Flask web app that checks any pasted article in real time.

ACHIEVEMENTS & CERTIFICATIONS

- **1st place of 50+ teams, Intra-Institutional Startup Competition:** Won with an Automated Power Monitoring System.
- **National hackathons:** Prototyped AI/ML solutions in 24 hours at Kalinga Hackathon, Hackomania and HackGenX.
- **Certifications:** Google Cloud Generative AI Leader (GAIL); HackerRank Python, SQL and C; AI/ML (Teach Nook).
